About ENOVIA MatrixOne

MatrixOne, Inc. was acquired by Paris-based Dassault Systèmes in May, 2006 and today is part of its ENOVIA PLM Collaborative Environment family of solutions. The ENOVIA MatrixOne solutions enable companies to accelerate product innovation to achieve top line revenue growth and improve bottom line profitability. ENOVIA MatrixOne is focused on helping companies across the automotive, aerospace & defense, consumer, machinery, medical device, semiconductor and high-tech industries solve their most challenging new product development and introduction problems. More than 850 companies use ENOVIA MatrixOne solutions to drive business value and gain a competitive advantage, including industry leaders such as BAE Systems, Bosch, Comau, General Electric, Honda, Johnson Controls, Linde AG, NCR, New Balance, Nokia, Philips, Porsche, Procter & Gamble, REI, Sony Ericsson, STMicroelectronics and Toshiba. ENOVIA MatrixOne (www.MatrixOne.com) is headquartered in Westford, Massachusetts, with locations throughout North America, Europe and Asia-Pacific.

Matrix10

Pressure has never been greater for global enterprises to deliver innovative products to market quickly and profitably. To compete in this environment, companies need to increase top-line revenue growth by bringing new innovations and technologies to market and drive bottom-line profitability by driving efficiencies into new product development processes.

In this increasingly outsourced environment, in which companies accomplish many non-core competencies outside the walls of their organization, those companies that best manage and collaborate with their value chain will be the most successful. This success will be measured in terms of their ability to quickly align their virtual enterprise and value chain in response to new product innovations, business opportunities and emerging markets.

Matrix10™ delivers the industry’s most flexible PLM environment that has been built with the needs and challenges of the global enterprise in mind. Matrix10 provides unrivaled out-of-the-box functionality that incorporates the proven business process best practices of some of the world’s most innovative companies, such as General Electric, Honda, Procter & Gamble and Toshiba. The functionality included in Matrix10 spans the entire product development lifecycle, providing companies with the ability to rapidly adjust business process functionality to meet their unique needs today and tomorrow, at the lowest possible total cost of ownership.

Matrix10 provides companies with a single, secure environment that eliminates the barriers caused by geographically dispersed organizations and value chains, multiple disparate systems and increasing security requirements. As a result, Matrix10 enables teams to work, collaborate and share ideas effectively regardless of location, all without jeopardizing the security of their company's intellectual property.

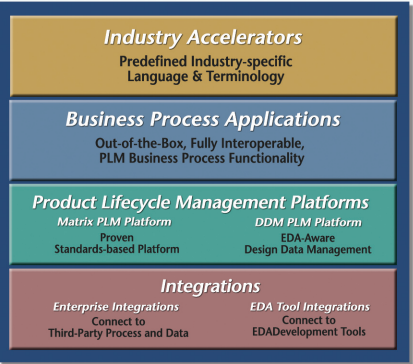

PLM Platform

Leveraging the Power of the Global Value Chain

With Matrix10, you can:

- Dramatically improve the internal effectiveness of new product development to drive more innovative products to market faster and at a lower cost
- Improve the effectiveness of your outsourcing by leveraging suppliers, design partners, and external manufacturing to generate unprecedented value through product lifecycle collaboration
- Maintain your competitive edge by combining unrivaled out-of-the-box functionality with the ability to easily configure solutions to match your unique needs and business processes
- Integrate to your existing enterprise and desktop applications to fully leverage IT investments and user skills to create a seamless information backbone for product lifecycle management (PLM)

ENOVIA MatrixOne PLM Environment

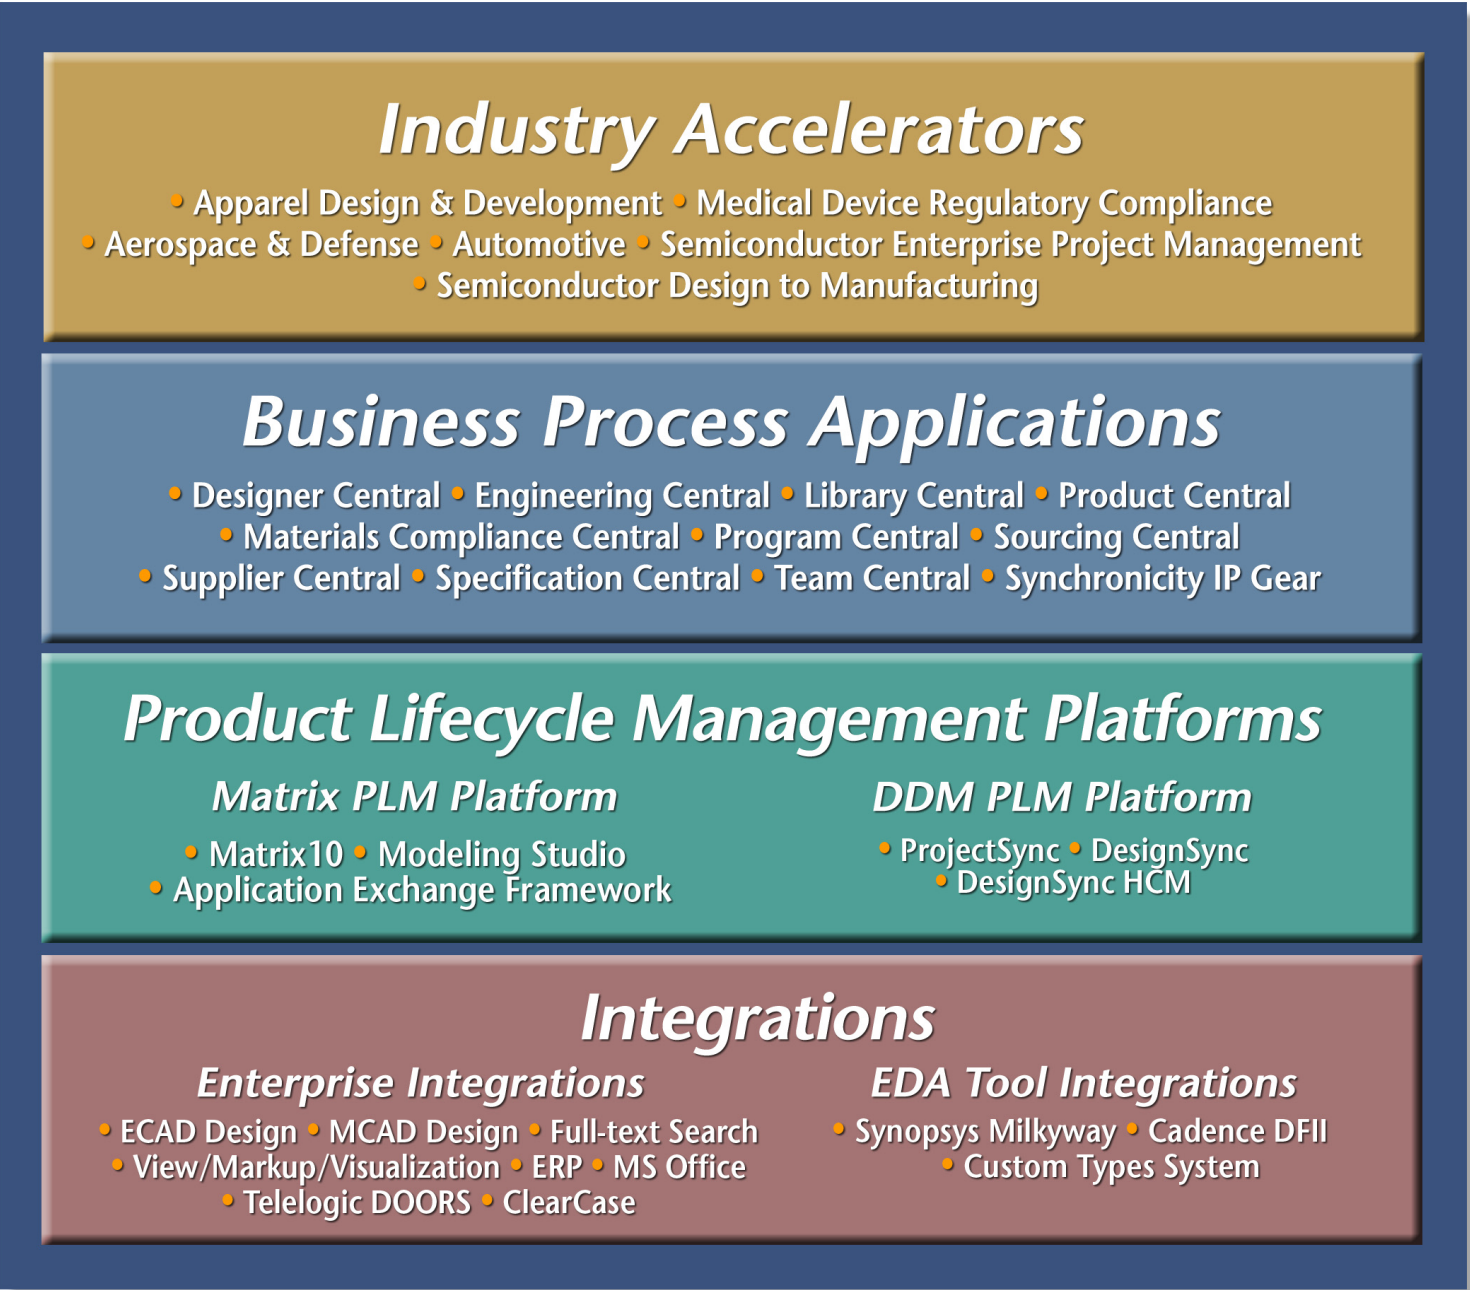

**Matrix10 is the industry's most flexible PLM environment.** Incorporating the best practices of some of the world's most innovative companies, Matrix10 combines unrivaled out-of-the-box PLM solutions with the ability to easily adjust business processes to meet the needs of customers, today and tomorrow, at the lowest total cost of ownership.

Matrix10 is powered by a PLM platform designed for global deployments of all sizes. It includes a full suite of proven PLM business process applications that cover a wide range of processes, including product planning, product development, product sourcing and program management.

Enabling customers to easily configure solutions to meet specific business needs, Matrix10's dynamic and flexible schema and built-in modeling tools enable organizations to quickly configure applications without expensive time-consuming coding.

Essential to any successful PLM initiative is the ability to interoperate with existing internal systems and applications—as well as those of your global partners and suppliers. Therefore, Matrix10 also offers a wide range of integrations and technologies that enable data sharing across applications, tools and enterprises.

**Matrix PLM Platform**

The Matrix PLM Platform serves as the foundation for the overall Matrix10 environment and is the underlying engine for Matrix10's PLM business process applications, modeling capabilities and third party system integrations. A proven, standards-based offering, the Matrix PLM Platform has been built to support global, enterprise-wide deployments and is equipped with the industry's highest level of performance and scalability, making it an ideal platform to support the product development process in any enterprise – in any industry. Within the platform is the Modeling Studio, which allows companies to easily configure processes, interfaces and data schema to ensure they meet business needs today and tomorrow.

**Business Process Applications**

The ENOVIA MatrixOne Business Process Applications, which incorporate the best practices of some of the world's most innovative companies, allow companies to drastically improve the way they collaborate with internal and external teams, develop products and work with suppliers and partners. ENOVIA MatrixOne's Business Process Applications are being used across all industries to allow companies to keep geographically dispersed teams connected through access to real-time data and business processes. As a result, companies are beginning to realize the many ways that ENOVIA MatrixOne's PLM solutions can help drive top line revenue growth, as well as bottom line profitability.

**Robust Enterprise Integration Capabilities**

Matrix10 represents the industries most open and adaptable PLM backbone with dozens of off-the-shelf integrations and technologies to enable seamless data sharing between third-party enterprise applications and desktop authoring tools, including leading spreadsheet, word processing, project management, MCAD, EDA and software development applications.

**Matrix10 the Flexible PLM Environment**

The Matrix10 environment includes several very distinct, yet powerful components that work together to enable organizations to collaborate with their value chain, manage critical information in a single, secure environment and leverage industry proven business practices while also retaining the ability to create their own best practices.
